

RADIOSENSITIZATION BY INDOLOCARBAZOLE DERIVATIVES

Abstract of the Disclosure

5

The present invention is based on the discovery of a composition that provides radiosensitization effect. Specifically the composition contains an indolocarbazole derivative. The present invention provides methods for radiosensitizing neoplastic cells using indolocarbazole derivatives and methods for treating neoplastic cells using
10 indolocarbazole derivatives in combination with radiation or radiation and chemotherapy.
